1

IMIDACLOPRID

Imidacloprid is an insecticide that was made to mimic nicotine. Nicotine is naturally found in many plants, including tobacco, and is toxic to insects. Imidacloprid is used to control sucking insects, termites, some soil insects, and fleas on pets.

4

DELTAMETHRIN

Deltamethrin is a synthetic pyrethroid pesticide that kills insects through dermal contact and digestion. It is applied for a range of commercial crops and recreational uses, and by extension controls a variety of pests. Its mode of action is primarily upon the basal ganglia causing repetitive nerve action.

5

ACETAMIPRID

Acetamiprid This compound is an insecticide that is introduced for controlling pests, but also for domestic use to control fleas on cats and dogs, it belongs to a relatively new class of insecticide the 'neonicotinoids. The precise structure of acetamiprid is that of a chloronicotinyl compound and it has been shown to be a potent agonist at the nicotinic acetylcholine receptors in insects. The primary use for acetamiprid is to control insects such as aphids, which have been known to attack and damage leafy plants.
